

EM GRIDS EM GRIDS
EM GRIDS EM GRIDS

GRIDS FOR ELECTRON MICROSCOPY

TEM GRIDS

Our extensive range includes:

■ Square mesh grids	Pages 5-12
■ Parallel line grids	Pages 12-13
■ Parallel line grids with central dividing bar	Pages 13-15
■ Slotted mesh grids	Pages 15-17
■ Folding grids	Pages 17-18
■ Hexagonal grids	Pages 19-21
■ Solid/slot grids	Pages 21-27
■ Finder grids	Pages 27-28
■ Freeze fracture grids	Page 28
■ Reference pattern grids	Pages 31-32
■ Co-ordinate grids	Page 33
■ Various specialist patterns	Page 28-33

Pyser-SGI Limited (were Graticules Ltd) have been manufacturing specimen support grids for electron microscopes for over 45 years using the extensive knowledge of processes and techniques gained from their micropattern production.

In 1994 Pyser took over the production of grids made in Holland by Brandsma BV (Known as Embra grids) and as a result offer a wide range of grids in a variety of metals and finishes to meet the majority of requirements.

More recently Pyser has introduced carbon coated grids as well as a Value range for the larger user.

Pyser grids are available throughout the world from laboratory and electron microscopy accessory suppliers or direct from our factory.

Copper, nickel and gold grids are all produced using electroforming processes to give well-defined patterns and consistent quality. Aluminium, stainless steel, molybdenum and titanium use an etching process.

Most grids are supplied in anti-static vials of 100 pieces, except for:-

Etched grids in aluminium, molybdenum, stainless steel, Embra gold and titanium, which are in vials of 25 pieces. The etched grids can easily be identified in the following section by GG, GM, GT, GA & GS appearing in the bracketed old part reference, i.e. [1GT75].

Value range of grids, which are supplied in vials of 120 pieces, in copper and nickel.

Carbon coated grids, which are supplied in indexed grid boxes of 50 pieces and supplied with index card.

Apart from grids coated on one side with rhodium to prevent tarnishing, all grids in copper, nickel and gold are matt on one side, bright on the other side.

All Maxta/Maxtaform grids have a smooth surface (shiny finish) and an outer ring width (frame) of 250-300 μ . Maxta or Maxtaform grids are defined by an H, HF or HR prefix and all have an 03D..... order code.

All Embra grids have a rough surface (matt finish) and an outer ring width (frame) of 350-400 μ .

Every grid manufactured by Pyser is individually inspected under a minimum of x25 magnification and packed in anti-static vials. The only exception are the Value range, which are sample inspected

All patterns are supplied as 3.00-3.05mm diameter grids. We are also able to supply 2.3mm grids (Siemens 2G range) to special order.

All grids are approximately 25 micron thickness, with the exception of stainless steel which is 12 μ and titanium which is 15 μ .

In the following section you will note that cross-references are given to relate the order code i.e. 07D00901 to the old part references i.e. [1GC50].

Please note that specifications given for etched grids in titanium, molybdenum, aluminium and stainless steel are given for guidance only as small variations can occur.

Central Indexing Marks

All grids with a reference starting 1G and our Value range have a central reference mark, HF and HR patterns do not.

Reference and Finder Grids.

Pyser were the first company to introduce referenced graticules for light microscopy and the first to make finder grids for the electron microscopist. Location of points of interest in a specimen and quick relocation is of vital importance in many investigations and with the high magnifications used in transmission electron microscopy this can be very tedious. Finder grids have been designed to assist in this task and there are today many types to choose from. We list those that have proved to be most popular.

Handled Grids.

By bending the handle upward the grid can be gripped by fine tweezers without the latter touching the specimen or any liquids. The grid can be placed over or underneath the specimen without surface tension causing the grid to slide up wetted tweezers. Grids can be held by their tab for spraying, rinsing and drying. The handle is also angled to assist in the alignment of the grid bars parallel to the axes of the stage.

Carbon Coated Grids

Pyser-SGI has a standard range of plain mesh grids with carbon coating. Additionally many of our

other grids can be supplied with this coating to special order.

SEM Grids

SEM's often require finder grids to place on pin stubs to assist in locating specimens of interest. These are generally 12mm diameter and we can offer standard products or custom made patterns to suit your exact requirements.

Custom Designs

Pyser are able to manufacture grids to your exact requirements. Just send in your specification detailing the pattern, bar thickness, material and quantity and we will provide a quotation

Information Layout

All EM grids in the following section are listed in the same format. This is an example of the information given:-

Copper	[7HFGC 400]	07D30935
Nickel	[7HFGN 400]	07D31935
Gold	[7HF GG 400]	07D32935

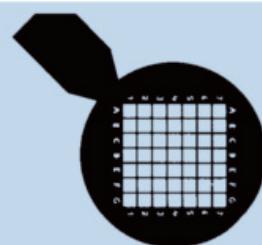

GRIDS FOR ELECTRON MICROSCOPY

SPECIAL TYPES WITH HANDLES

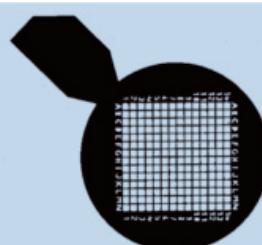

100 Mesh Co-ordinate

	Old part reference	Order code
Copper	[7HXC 100]	07D00937
Nickel	[7HZN 100]	07D01937

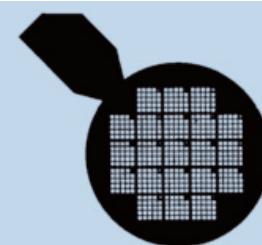

200 Mesh Co-ordinate

	Old part reference	Order code
Copper	[7HXC 200]	07D00938
Nickel	[7HZN 200]	07D01938

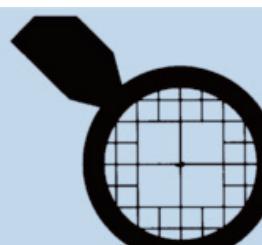

300 Mesh Co-ordinate

	Old part reference	Order code
Copper	[7HXC 300]	07D00939
Nickel	[7HZN 300]	07D01939

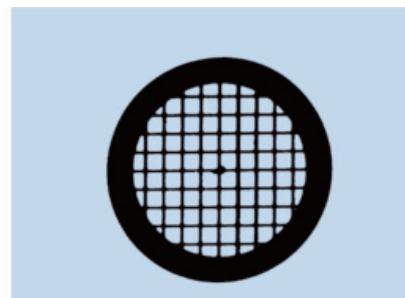

75 Mesh Freeze Fracture

	Old part reference	Order code
Copper	[5HGC 75FF]	07D30942
Nickel	[5HGN 75FF]	07D31942

VALUE RANGE OF ELECTRON MICROSCOPY SUPPORT GRIDS

- Low cost
- Copper or Nickel
- 50 to 400 mesh
- 120 grids per vial

The VALUE range of electron microscopy support grids has been introduced by Pyser-SGI to satisfy the need for quality EM grids at low prices.

For over 45 years the Graticules Division of Pyser-SGI has been supplying the quality needs of the EM market. The reputation of our Maxtaform and Embra grid products has always been of excellent quality for the discerning user. These ranges are our research grade products and are 100% inspected.

The VALUE range has been introduced to satisfy the needs of the general purpose user who buy grids in quantity, where the very highest quality of the research grade grids is not required, and price is very important. All grids have a centre mark.

Specifications

Mesh Size	Material	Order Code	Pitch (μ)	Bar Width (μ)	Hole Size (μ)	Transmission (%)
50	Copper	09D00901	508	83	425	70
	Nickel	09D01901	508	83	425	70
100	Copper	09D00903	254	50	204	65
	Nickel	09D01903	254	50	204	65
150	Copper	09D00904	169	44	125	55
	Nickel	09D01904	169	44	125	55
200	Copper	09D00905	127	37	90	50
	Nickel	09D01905	127	37	90	50
300	Copper	09D00906	85	31	54	40
	Nickel	09D01906	85	31	54	40
400	Copper	09D00907	64	26	38	35
	Nickel	09D01907	64	26	38	35

Please note minimum order quantity 5 vials of each type. All copper and nickel Value grids are supplied in vials of a minimum 120 pieces. Dimensions given are for comparative purposes only, there may be slight variations and occasional imperfections. Prices exclude shipping.

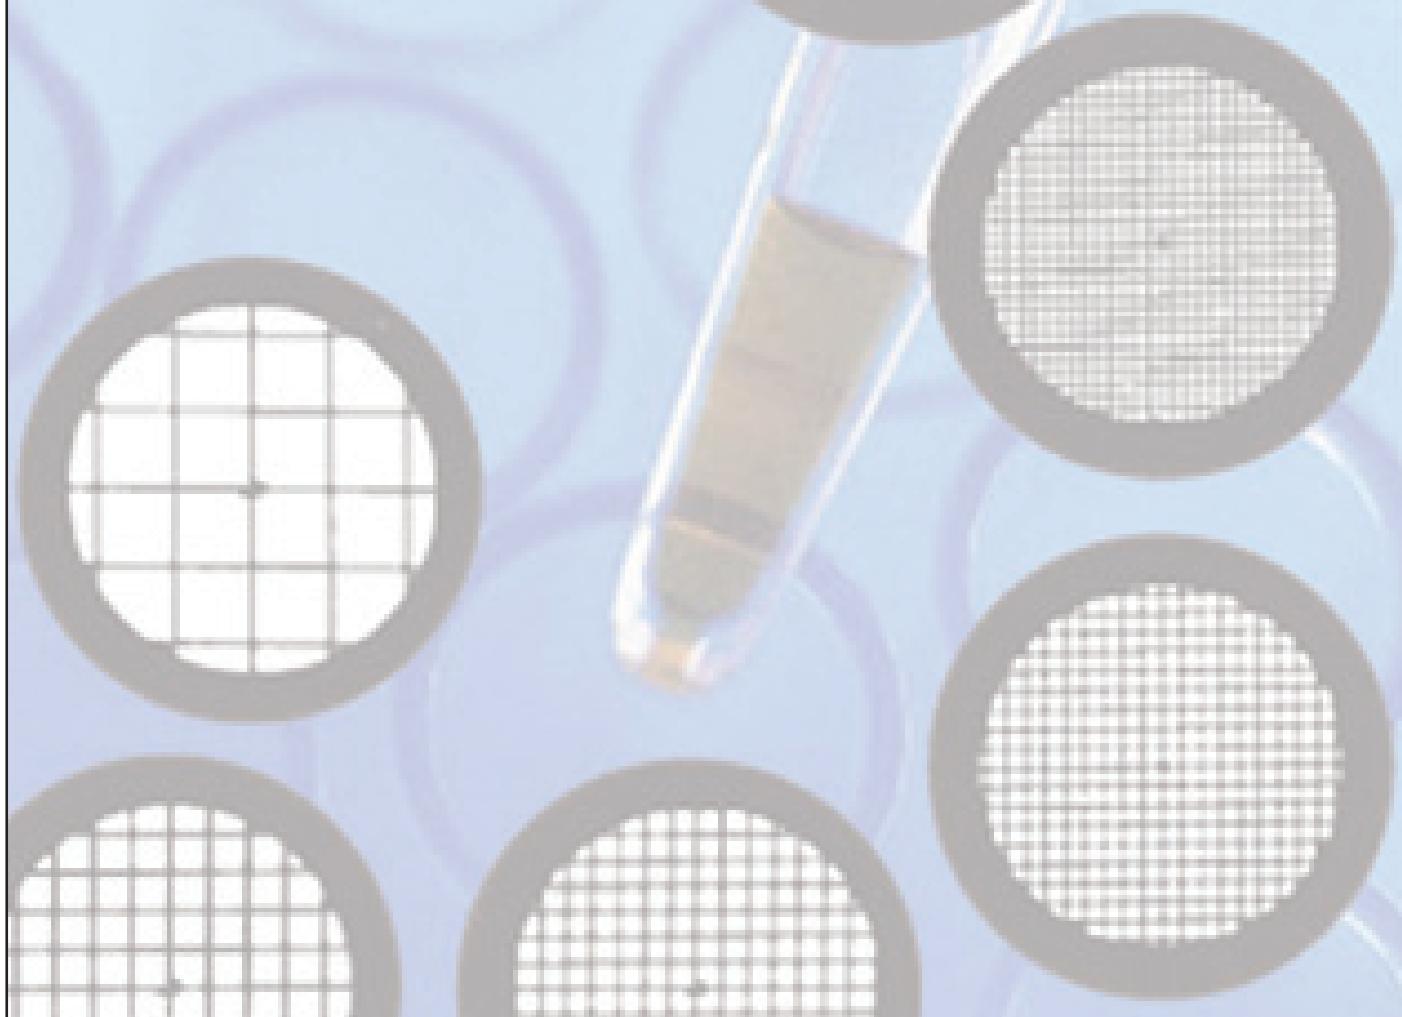

CARBON COATED GRIDS

Pyser –SGI now offer Carbon support film coatings on their range of TEM grids.

All coated grids are supplied in vials of 50 pieces and we have listed here the most common mesh grids from 200 to 400 mesh. We can of course provide this support film coating on any of our extensive range of grid products – please enquire for prices.

DESCRIPTION	MESH	PITCH MICRONS	HOLE MICRONS	BAR MICRONS	TRANS-MISSION %
HF34Cu with carbon	200	127	101	26	63 (+/-2%)
HF34Ni with carbon	200	127	101	26	63 (+/-2%)
HF35Cu with carbon	300	85	60	25	50 (+/-2%)
HF35Ni with carbon	300	85	60	25	50 (+/-2%)
HF36Cu with carbon	400	64	41	23	41 (+/-2%)
HF36Ni with carbon	400	64	41	23	41 (+/-2%)

Minimum order is 2 vials (can be mixed types). Delivery typically 3-4 weeks

Other products

Inspecta

The image displays three vertical panels from a catalog, each featuring the Inspecta logo and various microscopy-related products.

- Top Panel (Orange):** Features the Inspecta logo at the top. Below it, the text "Modular Microscope Solutions and Components" is repeated seven times. The panel also includes several small images of microscopes and measuring scales.
- Middle Panel (Yellow):** Features the Inspecta logo at the top. Below it, the text "Magnified Measuring Scales" is repeated seven times. The panel includes images of a person using a microscope, a close-up of a measuring scale, and various microscope components.
- Bottom Panel (Blue):** Features the Inspecta logo at the top. Below it, the text "PORTABLE MICROSCOPES" is repeated five times. The panel includes images of a person using a portable microscope, a close-up of a portable microscope, and a CD being examined with a portable microscope.

Other Products in the Inspecta Range:

- Magnifiers with Reticles
- Thru Hole Scopes
- Microscope Components
- Calibration Products
- Portable Microscopes
- Microscope Systems
- Video Inspection
- Co-ordinate Measurement
- Depth Scopes
- Measuring Microscopes
